

bcl-6

Catalog Number:	760-4241
Quantity:	50 tests
Controls:	Lymph Node, Tonsil
Isotypes:	IgG ₁
Clone Name:	GI191E/A8
Species:	Mouse
Localization:	Nuclear
Regulatory Status:	IVD

Anti-bcl-6 is a transcriptional regulator gene which codes for a 706-amino acid nuclear zinc finger protein. Antibodies to this protein stain the germinal center cells in lymphoid follicles, the follicular and interfollicular cells in follicular lymphoma, diffuse large B-cell lymphomas and Burkitt's lymphoma, and the majority of the Reed-Sternberg cells in nodular lymphocyte predominant Hodgkin's Disease. In contrast, anti-bcl-6 rarely stains mantle cell lymphoma and MALT lymphoma. bcl-6 expression is seen in approximately 45% of CD30+ anaplastic large cell lymphomas but is consistently absent in other peripheral T-cell lymphomas.
